CODE CAMP

Do you know how to create an iPhone app?

A number of our Junior School students now do!

During the recent school holidays, Thomas Hassall hosted its second Code Camp. A total of 42 primary students from Thomas Hassall and the local area attended the engaging, three day workshop. Students used their creativity and critical thinking skills to design and create their very own iPhone app. They had lots of fun and enjoyed showing off their ingenuity.

Who knows? One day in the not-too-distant future, you may download one of these creative students' apps...
