

STUDENTS PUT BEST FINS FORWARD

Amber, Stripes and their friends have joined the H30 aquarium this term.

The others from last term are on holiday in another aquarium, enjoying their new home. A roster system among students has been set up to ensure the fish are fed once a day except on Friday, when they can have a double pinch.

All of the attention and admiration for the scaly creatures has paid off! Amber and Stripes have now laid eggs in the aquarium. Amber is jealously guarding a spray of eggs up on the filter intake.

The Lifecycle of an Angel book is on hand for those wanting to find out more fascinating information about the biology of these fish.
