

THE WAY

4D CHALLENGE THEMSELVES

Class 4D recently participated in the Bebras Australia Computational Thinking Challenge.

This Challenge is run by the CSIRO and it is a fun way to develop computational thinking and problem solving skills. Students chose to work either individually, in pairs or small groups and they completed a series of challenging and engaging problems, some requiring students to use a great deal of perseverance and persistence.

All students performed well and achieved some great results. Special congratulations go to **Annabel** who achieved a Distinction, and **Alex L** and **Adrian** who achieved a High Distinction. Well done!

4D will participate in Round 2 of the Challenge in September.
