

THE WAY

TERM 4 : FRIDAY 14
DECEMBER 2018

JUNIOR SCHOOL STEM CLUB

Earlier this term we launched the Junior School STEM Club for Years 4-6, with a regular group of students faithfully attending each week. Throughout the term, students were challenged to use the coding program, *Scratch*, to create their very own game.

Our last week of STEM Club was spent sharing and playing each other's games. There was a wide range of games, with one encouraging healthy eating, another delving into the world of Harry Potter, and yet another with a football goal scoring challenge. What a talented group of students!

Some of the students reflected on what they most enjoyed about STEM Club:

I like that we get to create games and show other people what we can do. – Kendra S

I enjoyed doing the coding and coming back every week to improve on my game and make it better. In the last week I enjoyed seeing all the other games and how good they were. – Aaron D

I liked creating my own game. – Adrian Z

It was fun playing other people's games and we got to be with our friends. – Davina I

I like that we got to be creative and could make anything up. We could see what other people enjoyed doing and what they made. – Annabel C
