

THE WAY

DART BOARD CABINET EN POINTE

The Year 9 Industrial Technology – Timber students rose to the occasion when building their most recent project, the Dart Board Cabinet.

Students had a brief, a set of plans and a cutting list to work from. They were also asked to be creative and add their own touch when using CNC routing to decorate their piece.

Students installed hinges, dart and chalk holders, as well as painting their own black board. They also used contact adhesive to glue cork inside the back panel.

Congratulations to each student for their determination to finish such a difficult project.
