

THE WAY

YEAR 8 GEOGRAPHY WATER EXCURSION

Recently, Year 8 students have had the opportunity to extend their studies on water management with a trip to both Warragamba Dam and Penrith Lakes.

Students were able to get close to the Dam and view the damage caused by the recent floods. They learned about water testing and how the water we all drink is managed by the dam system. At Penrith Lakes centre they saw how new housing developments can be built to conserve water and also how water has to be managed to keep it suitable for all the leisure uses available at the lakes.
