

KINDERGARTEN MATHS

In Kindergarten, the students have been busy in Maths undertaking a range of well-designed, hands-on activities to enable them to create connections and to support the children to think critically.

By using hands-on activities, children are actively engaging with tasks and manipulating the objects to improve their maths knowledge. This assists the children to understand the relationship between numbers and the number system. Learning this way also enables the children to use their new 'maths' vocabulary when working and collaborating with each other.
