WATER TESTING IN YEAR 8 GEOGRAPHY

Year 8 Geography students were involved in an excursion investigating two distinct locations to assess the environment's influence on water quality. One site was situated close to the M7, while the other featured a sheltered river. They examined water pollution levels and measured both soil and water PH. Observations were made regarding the interplay between the environment and water condition at both locales. This practical fieldwork not only allowed the students to apply their classroom knowledge but also provided an invaluable opportunity for hands-on learning.
