

ENVIRONMENTAL MANAGEMENT IN CRONULLA

In their study of environmental management, Year 10 students embarked on an excursion to explore coastal management at Cronulla Beach. They gained insights into strategies employed to address beach erosion and observed the techniques scientists use to study dunes. The excursion provided a unique opportunity for hands-on experience with fieldwork. Despite the overcast day, the weather remained dry, with rain only starting once the group had boarded the bus. This hands-on experience assist with their knowledge and understanding of environmental issues.
