

LIVING THINGS IN WETLANDS

Year 3 has been learning all about living things in wetlands this term. We have investigated the lifecycle of many wetland animals and plants. 3D researched a range of wetland animals and created a labelled diagram to show their life cycles.

We have started growing our own seeds in our classrooms. Each day, we water them and make sure they've got enough sunlight.

The students have created mini informative booklets that describe the importance of habitats to a living thing. Students researched an animal in a small group, then used the features of an informative text to present their findings.
