## HICES MATHEMATICS

**On Wednesday 18 June, Thomas Hassall Anglican College took two Year 7 and two Year 8 students to Richard Johnson Anglican College to compete against 35 other teams in the HICES Maths Challenge.**

They participated in 3 different activities – the group challenge, the SWISS challenge, and the relay challenge.

In the group challenge, Noah, Thomas, Lizzie and Isaac had to work together to solve 4 problems at a time. Once 2 problems were solved, they were given the next set of 2 questions. There were a total of 24 questions to be completed in 45 minutes.

The SWISS challenge involved competing against one school at a time. Our students sat in alternate seats and had to determine the algebraic rule linking  $x$  and  $y$  in a table of values and therefore say what the next number should be. They had 5 seconds to say an answer before it was passed on to the next student from the other school.

For example, what numbers should be in the empty boxes below?

$x$	1	-15	7	8	-2	23
$y$	20.2	17	21.4			

The final challenge was the relay – where our Year 7 students worked together to solve a problem to get the next question which our Year 8 students would then collaborate and solve. There were a total of 25 questions to be completed in 45 minutes.

Here's a sample Year 8 question – can you solve it?

An isosceles triangle has vertices at  $(7,8)$ ,  $(a,3)$  and  $(7,3)$ . What is the product of all the possible values that  $a$  could have?
