YEAR 9 INDUSTRIAL TECHNOLOGY

The Year 9 Industrial Technology Timber students have recently completed an exciting new project as part of their latest assessment task: designing and constructing their very own Pucket Boards.

Pucket is a fast-paced, competitive game where players use elastic to shoot pucks through a small opening into their opponent's side of the board. The aim is to clear your own side of pucks before your opponent does, making for plenty of fun and friendly competition!

While the finished products are entertaining to play, constructing the boards required students to develop and demonstrate a range of advanced woodworking skills. Students were challenged to produce accurate rebate joints, as well as incorporate a sliding lid into their designs. These techniques required careful measuring, precision cutting and attention to detail throughout the construction process.

The project provided students with an opportunity to apply their developing skills in the workshop while gaining valuable experience with more complex construction methods. It has been fantastic to see the creativity, problem-solving and craftsmanship demonstrated by the Year 9 students.
